

THIRD ANNOUNCEMENT AND DEADLINE EXTENSION

**The VIII-th International Conference
"SOLITONS, COLLAPSES AND TURBULENCE:
Achievements, Developments and Perspectives"
Chernogolovka, Moscow region, RUSSIA
May 21-25, 2017**

The deadline was extended until Feb. 10, 2017 for the online registration and abstract submission to the VIII-th International Conference "SOLITONS, COLLAPSES AND TURBULENCE: Achievements, Developments and Perspectives" (SCT-17) in honor of Evgenii KUZNETSOV's 70th birthday. We apologize for this reminder if you already made the conference submission. We attach below a general info about the conference, submission process, visa info etc.

L.D. Landau Institute for Theoretical Physics of the Russian Academy of Sciences, P.N. Lebedev Physical Institute of the Russian Academy of Sciences, and Novosibirsk State University are convening the VIII-th International Conference "SOLITONS, COLLAPSES AND TURBULENCE: Achievements, Developments and Perspectives" (SCT-17) in honor of Evgenii KUZNETSOV's 70th birthday. The conference will be held in Chernogolovka (40 km northeast from Moscow) in the new building of the Landau Institute for Theoretical Physics in May 21 - May 25, 2017.

The main goal of this conference is to bring together key scientists with various background and expertise, both physicists and mathematicians (young researchers are welcome) working in the field of nonlinear science in order to discuss the main directions of development, achievements and perspectives, to further develop existing connections and (or) establish new links between three main branches of nonlinear science: SOLITONS, COLLAPSES and TURBULENCE. The topics will range from nonlinear optics, plasma physics, hydrodynamics, solid state physics, differential geometry, string theory, and gravity, to soliton theory, combining the inverse scattering transform and recent approaches to exact integrable and near integrable models, wave collapse physics, turbulence and chaos. It is planned to have a balance mix of theory, experiment and industrial applications and organize a truly interdisciplinary conference.

SCIENTIFIC PROGRAM includes:

- Soliton theory and the inverse scattering transform;
- Solitons and their applications in nonlinear optics, plasma physics, hydrodynamics, etc.;
- Theory of wave collapse;
- Coherent structures (patterns, solitons, etc.) and turbulence;
- Developed wave and hydrodynamic turbulence.
